provider of mobile & fixed telephony, and mobile & wired internet  
JULY 2012 - OCTOBER 2012

Advising on cellular communication and mobile Internet. Solving problems of software, cell phones network problems. Providing information about the prices of mobile communication and services on contract.

### EDUCATION

**Povolzhsky State University of Telecommunications and Informatics**  
SEPTEMBER 2010 - FEBRUARY 2016

Master's degree of Information Security

### SKILLS

- OS: Linux, Windows, Mac OS X
- Languages: C++ (with Qt, Gtk+), Java, Groovy, Ruby on Rails, Bash \ Shell
- DBMS: Postgresql 9.1+, FireBird 2.1+, MSSQL, SQLite, MySQL
- VCS: git, svn
- Nginx, Apache2, Tomcat, GlassFish
- html, css, js, json, yaml
- MVC, UML, OOAD, Multithreading, Design patterns
- Maven, Gradle, Chef, Puppet, Vim
- My passed courses and certificates : <https://batiaev.com/#courses>

# Cover letter

My name is Anton Batiaev. And in the past few years retrained from C ++ to Java developer. Also I use Linux-based OS more than 6 years as my primary operating system to work. And on my current work in the Haulmont company (<http://www.haulmont.com/>), which developing software for automation of taxi businesses around the world (Sherlock Taxi project <http://www.sherlocktaxi.com/>), those two of my key skills and English language skills, improved in last summer when I was working on the Work and Travel program in Wyoming, found the best application. In its work, in addition to the development of server-side applications in Java, I also engaged in the setting of a new production servers for new customers, monitoring and maintenance existing production and test servers, and upgrade to new versions our app on current customer servers (more than 15 taxi companies, each have up to 7 linux servers with our fault-tolerant distributed application), modification modules required for our internal purposes, such as improving the continuous integration system TeamCity, writing various hooks for svn and setting of the Chef app to replace custom scripts to automate server management and many other things. For describing some the technical details of the my working process I have to deal with version control systems Git, Svn (including GitLab and WebSvn); continuous integration system TeamCity, bug and issue tracker YouTrack, programming languages Java, Groovy, Bash, Python, Ruby, applications Chef, Tmux, Vim, monitoring systems Nagios, Icinga, Zabbix, web servers Nginx and Apache, servlet container Tomcat, RDBMS Postgres and MS SQL, and a lot of other technologies.

Remembering my specialty at the university - information security of telecommunication networks - I do not ignore this aspect and was configuring our server to secure as much as possible (SSL with rated A+, VPN, SSH only with key, Fail2Ban to protect DDOS, DKIM for email and much more)

So I think I'm with my skill will perfect part of your team and together we can build a great product that will be admired by all users.

Sincerely yours,

Anton Batiaev
